Projects

Module 1: Personal Website

Project Overview

The goal of this project is to build a personal developer website that showcases a biography, contact information, and details about Python projects. This project introduces the fundamentals of website development using Flask, a lightweight Python web framework.

Students will begin by learning to structure content with HTML, then enhance the presentation using CSS to style page elements. The website will serve as a creative portfolio, combining personal and professional information with project highlights.

Throughout the course, the site will be iteratively updated to reflect the student's expanding set of Python projects, resulting in a fully functional and personalized web presence by the end of the assignment.

Technologies Used

Python 3.10+

Flask Web Framework

HTML5 & CSS3

Jinja2 Templates

Flask Blueprints

Key Features

Responsive web design

Navigation bar with active tab highlighting

Professional biography and contact information

Project showcase with detailed descriptions

Clean, modern styling with CSS

Project Repository

View on GitHub

Future Projects

This portfolio will be updated throughout the course with additional Python projects, demonstrating growth in software development skills and expanding technical expertise.
